Project: React + Capacitor cross-platform mobile application for the MNCH Kenya Mentorship & Assessment Platform — serving facility mentors, county leads, and mentees across Kenya. Delivered as a Progressive Web App and Android APK (App ID: *com.mnch.assessments.app*).

SERVICES RENDERED

ITEM	AMOUNT (KES)
App Design, Layout & Navigation	45,000.00
- Designed the overall look and feel of the app — colours, fonts, buttons, and spacing — so it feels clean and professional on any phone screen. - Built the main navigation structure: a header bar at the top showing the user's active area, and a bottom menu bar for switching between sections. - Each user only sees the menu tabs relevant to their role — a mentor sees different options than a mentee or a county administrator. - Tapping the user's initials in the top corner opens a profile panel where they can view their details and log out. - The app shows a smooth loading screen on startup and a helpful message if a user's account has not been given access to any section yet.	
Mentorship Lifecycle Module	95,000.00
- The largest part of the app — covers everything a mentor needs to run an on-site mentorship programme from start to finish. - Mentors create a new mentorship by following a step-by-step wizard: choose the facility, select the programme, assign a co-mentor, and set dates. - Within each mentorship, mentors manage classes — start a class, add training modules, and formally close it once complete. - For each module, the mentor marks attendance for each mentee (present or absent) with an option to mark everyone at once. - Session notes can be added to record what was covered or any important observations during a session.	

ITEM	AMOUNT (KES)
• Mentors can add existing staff as mentees, create new mentee accounts from the app, remove participants, and generate a self-enrolment link for mentees to join without the app. • Mentees see only their own classes, their progress through each module, and upcoming sessions. • A reports tab gives mentors a summary of attendance rates, modules completed, and how each mentee is progressing.	
Global Trainings Module	20,000.00
• A separate section for national and county-level training events organised centrally — distinct from on-site facility mentorships. • Users browse upcoming and past trainings, view full details (dates, location, objectives), and enrol themselves if eligible. • Participants confirm their attendance directly through the app, keeping records up to date without paperwork. • Has its own navigation and visual style, keeping it clearly separate from the mentorship area to avoid confusion.	
Offline Mode & Automatic Background Sync	140,000.00
• The app works fully even with no internet — mentors in remote or rural facilities can fill in data, mark attendance, and manage mentorships without any data connection or Wi-Fi. • Everything the user does while offline is saved securely on their phone and sent to the server automatically the moment a connection becomes available — no action is needed from the user and nothing is ever lost. • When the app opens, it loads instantly using information already stored on the phone, so users can start working immediately without waiting for the internet. • If internet becomes available while a user is mid-task, the app syncs in the background without interrupting or slowing down what they are doing. • All types of actions work offline — submitting forms, marking attendance, writing session notes, adding mentees, starting or ending a class, and enrolling in trainings. Each of these is queued and sent to the server in the correct order once connectivity returns. • The app checks whether data on the server has changed since the last sync and only downloads what is new, keeping the process fast and not consuming unnecessary data bundles. • If a record was created on the phone while offline and the server later assigns it a permanent ID, the app silently updates its local copy so there are no duplicate records or mismatches. • A small badge on screen shows the user how many changes are still waiting to be synced, and a brief notification appears when new data from the server has been successfully received.	

App Design, Layout & Navigation	KES 45,000.00
Mentorship Lifecycle Module	KES 95,000.00
Global Trainings Module	KES 20,000.00
Offline Mode & Background Sync	KES 140,000.00
Subtotal	KES 300,000.00
VAT (exempt — software service)	KES 0.00

TOTAL DUE	KES 300,000.00
------------------	-----------------------

ITEM	AMOUNT (KES)
------	--------------

- On log out, all locally stored data is securely wiped from the phone, ensuring no sensitive health records remain on a shared or lost device.
- All data stored on the device — mentorships, classes, attendance records, user information, training schedules, and app settings — is organised into separate storage areas so the full app experience is available at all times regardless of connectivity.
